

ABSTRACT

This project is a web based shopping system for an existing shop. The project objective is to deliver the online shopping application into android platform. This project is an attempt to provide the advantages of online shopping to customers of a real shop. It helps buying the products in the shop anywhere through internet by using an android device. Thus the customer will get the service of online shopping and home delivery from his favorite shop. This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains. If shops are providing an online portal where their customers can enjoy easy shopping from anywhere, the shops won't be losing any more customers to the trending online shops such as flipcart or ebay. Since the application is available in the Smartphone it is easily accessible and always available. ..

Requirement Analysis

List of Tables:

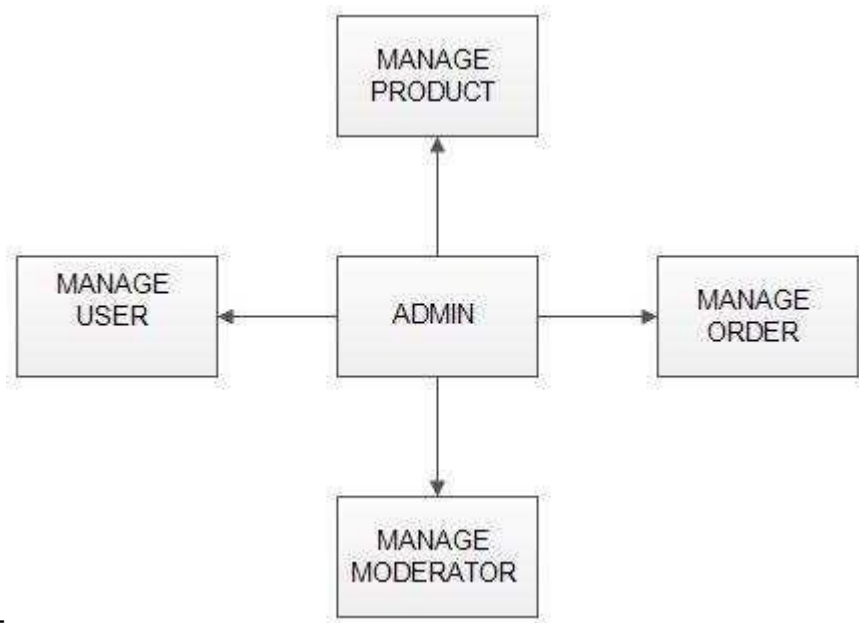

LOGIN TABLE

USER DETAILS

PRODUCT DETAILS

PRODUCT ORDERS

List of Attributes with their Domain Types:

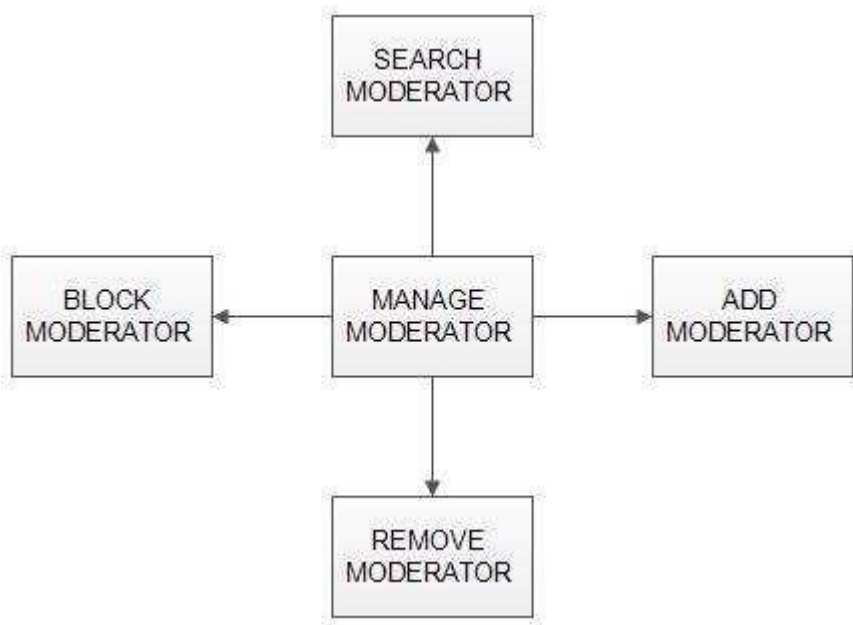

Admin module

This module is divided into different sub-modules.

1. Manage Moderators
